

Closing the Wishlist Confidence Gap

Improving Myntra's wishlist-to-purchase conversion by resolving in-app decision doubt — without discounts, coupons, or cashback.

FOCUS

Ethnic / occasion / fashion-forward wishlist items

LEVER

In-app decision confidence, not price

CONSTRAINT

No monetary incentives

WPCR is stuck at decision confidence, not at “they never open the app”

North Star — WPCR: % of users who purchase ≥ 1 wishlisted item within 30 days of adding it.

In scope: bookmarkers → intenders · ethnic > basics · confidence-blocked · once-a-month + 2–4×/month

Out of scope: rarely shoppers · price-only waiters (no monetary levers available)

Quality is loudest, fit is real, price is out of scope

Play Store + App Store + YouTube reviews → LLM-tagged by theme → mention share (n = 550).
Reviews under-index silent wishlist freeze — this sets direction, not the full picture.

SCOPE READ-OUT

● Quality / authenticity	47.8%	IN
● Fit / size	13.0%	IN
● Comparison	11.8%	IN
● External research	10.5%	IN
● Found alternative	5.2%	IN
● Occasion mismatch	2.6%	IN
● Price / deal-waiting	13.9%	OUT

Combined in-scope confidence themes dominate; price is the largest single out-of-scope theme and is excluded from this solution.

AI Discovery Engine: [\[LINK: AI Discovery Engine — Streamlit Tab 1\]](#)

Pilot (n=10): monthly+ shoppers in “Probably” leave the app — 7/10 blockers are confidence

Caveat: n=10, not statistically powered; screener leaky (frequency/wishlist-size blank for 7/10). We pursue the 7/10 confidence cluster, not the 3/10 price cluster.

MAIN BLOCKER (of 10)

Confidence cluster (comparison + quality + occasion + fit) = 7/10

Named items: 4/10 ethnic/occasion (Rakhi dress, wedding dress, kurta set, kurta)

Intent: Probably 6/10 · Yes, definitely 3/10 · Not sure 1/10

OUTSIDE-APP BEHAVIOUR — 10/10 did at least one

Compare prices — 6 · Visit store — 6
Instagram — 3 · Friends — 3 · YouTube/Google — 3

WHAT WOULD UNSTICK THEM

7/10 wanted similar-buyer reviews/photos

COPING TODAY

- Order two sizes, keep the one that fits
- Order per size chart, then exchange
- Leave it in the wishlist until payday

PROBLEM DEFINITION

No in-app way to resolve fit, quality, or comparison on ethnic saved items

SEGMENT	24–30, Tier 1–2, shop fashion at least once a month, 5+ wishlist items, several dormant 2+ weeks, “Probably” intent, ethnic/occasion or fashion-forward
PRODUCT OUTCOME	Decision Confidence Rate (funnel stage 2)
ROOT CAUSE	No in-app mechanism to resolve fit, quality (fabric/threadwork vs. photo), or comparison doubt at reconsideration — users leave the app and the loop rarely completes
WORKAROUNDS TODAY	Order multiple sizes and return, ask friends, visit stores, search reviews off-app, leave items in an ever-growing wishlist
USER VALUE	Less anxiety, fewer returns, faster yes/no on occasion purchases
BUSINESS VALUE	Higher-AOV ethnic slice converts existing saved demand without discounting; avoids inflating returns

Why ethnic-wear confidence, not basics and not discounts (once-a-month included)

- Ethnic/occasion/fashion-forward has higher AOV than basics and higher hesitation — same lift moves more GMV
- Confidence themes (quality, fit, comparison, occasion) outweigh price in both AI discovery and primary research once price is excluded
- One product, one mechanism (in-app decision confidence) serves both frequency segments — not two different builds

EXPLICITLY NOT SOLVING

Acquisition · “add more to wishlist” · reminder/push spam · price or discount levers

PRIMARY DESIGN CASE

2–4×/month intenders

Already open the app often — their gap is confidence, not return frequency.

ALSO IN SCOPE

Once-a-month intenders

Same dormant-wishlist + confidence pattern. Fewer sessions in a 30-day window means revisit matters too — a segment-width note, not a reason to build re-engagement as the hero.

The MVP lives on the wishlist: check fit before Move to Bag

Same surface users already open — one extra action at the moment of hesitation, no new destination and no discount.

CHECK FIT — OPENS ON THAT SAVED ITEM

Libas · Embroidered Anarkali Suit

Saved 3 weeks · intent: Probably

Fit confidence 67 — labelled, not a black box

From this item's 15 reviews: 3 read true-to-size, 3 say size up, 3 praise the threadwork, 2 flag average lining.

"Will the work look cheap in person? Should I size up for daytime Rakhi?"

The answer quotes those reviews back with counts, and says what the reviews do not cover — instead of inventing a percentage.

All 15 reviews shown

Compare max 3 saved

WHAT IT DOES

- 1 Confidence score with provenance**
Counted from that item's reviews and return reasons
- 2 Ask on the saved item**
Fit, fabric or threadwork versus the photo, occasion
- 3 Personalised fit**
Cross-references the shopper's past orders where available
- 4 Compare, capped at 3**
Only similar items already on the wishlist

COLD START, HANDLED HONESTLY

The Kalini lehenga has 3 reviews, so its card reads "Need more reviews" and falls back to brand size chart and Q&A.

Moves stage 2 (decision confidence): Move to Bag stays the shopper's decision, and nothing in the flow offers a discount.

Deployed MVP: [LINK: Deployed MVP — Streamlit Tab 2]

WPCR + resolution rate + return/wishlist-add guardrails

NORTH STAR

WPCR — 30-day wishlist-to-purchase conversion

PRIMARY PRODUCT METRIC

Decision Confidence Rate

% of assistant interactions ending in add-to-cart, a “this helped” signal, or a clear decide-no

LEADING INDICATOR

Assistant Engagement Rate

% of wishlist visits where the tool is opened

GUARDRAILS

Return rate

Must not increase

Wishlist-add rate

Must not decrease

Fit/quality support contacts

Expected to decrease

Context-only note: for once-a-month shoppers, also watch revisit rate as background context — not the MVP's job.

De-risk cold start, hallucination, trust, hiding, compare-overload

Cold start	New/low-review ethnic items lack data	Fallback to brand-level size charts and community Q&A
AI hallucination	Wrong fit/quality claims erode trust	Ground answers strictly in real review/return text; show provenance; use confidence caveats, not absolute claims
AI-only distrust	Users don't trust a single AI summary	Show real user reviews alongside the AI summary, never AI-only
Low discoverability	Feature goes unused if buried	Embed directly inside the wishlist card, not a separate section
Compare-overload	Too many options re-creates decision fatigue	Hard cap at 2–3 saved similar items

Constraint carried through every mitigation: never a discount, coupon, or cashback tool.

Recap + artefact links

Resolve fit, quality (photo vs. real fabric/threadwork), and comparison doubt at hesitation on high-AOV ethnic/forward saved items, for shoppers who buy at least monthly — lifting decision-confidence rate and WPCR without touching price.
